

OSTREA LURIDA OA DIAGRAM **Proposed System Diagram, 1/29/2017**

A, B & C correspond to triplicates

*Need to figure out if we can a) maintain separate oyster groups (diff't origins) in same tank, not allowing cross-fertilization, and b) if we can reliably modify temperature for the whole system – there's a in-line mixer to allow for temperature control (mixing ambient + heated lines), but not sure if it's functional.
